and go through a KYC Registration Agency.

Opening a loan or bank account:

1. Begin the application in the lender's app or on its website.
2. Have the Aadhaar-linked mobile beside you, because that is where the OTP arrives whatever number you typed into the form.
3. Enter the Aadhaar, approve the OTP, tick the consent screen.
4. Then e-sign.

For mutual funds or a demat account, go through a SEBI-registered KRA such as CVL KRA or CAMS KRA, or let your broker do it. Complete an Aadhaar OTP or a Video KYC, upload a PAN copy, then track the status on the KRA site using your PAN. Validation usually takes a few working days.

E-KYC: Meaning, Full Form, Types, Process, and Eligibility

Image Source

Neha, a freelance designer, found the studio she wanted on a Tuesday and had to leave a deposit by Friday. A branch visit with photocopies would have taken longer than the landlord would wait. She finished the loan application from her sofa in about ten minutes instead, and the money reached her the same evening. What made that possible was e-KYC.

[To Avail Personal Loan Apply Now](#)

What Is e-KYC?

The e-KYC full form is electronic Know Your Customer. It is the paperless way a lender or NBFC confirms who you are and where you live, by pulling authenticated records from UIDAI against your Aadhaar instead of asking you to post a photocopy. Nothing passes through a scanner or a data-entry clerk on the way, so the details cannot drift, and that is the real reason same-day lending works at all.

Types of e-KYC Methods in India

1. OTP-Based e-KYC

A one-time password lands on the mobile number registered against your Aadhaar, which makes this the method behind most instant personal loans, needing nothing beyond the phone already in your hand.

2. Biometric-Based e-KYC

Here you press a finger or look into an iris scanner on a registered device. Lenders use it when they want proof you were physically present, which is why it happens at a branch or a business correspondent's counter.

3. Offline e-KYC

Offline e-KYC keeps your Aadhaar number out of the lender's database altogether. You download a digitally signed XML file from myaadhaar.uidai.gov.in, lock it with a four-digit share code of your own choosing, and hand that file across. The lender checks UIDAI's signature without ever calling UIDAI's servers. What it receives is your name, your address, your photograph and a

session, asks you to hold your PAN up to the camera, matches your face against your Aadhaar photograph and geotags where you are sitting, all of which RBI's V-CIP rules require. It delivers full KYC without a branch visit, and it lifts the Rs 60,000-a-year lending cap that OTP-only KYC carries.

Who Can Complete e-KYC

Three things are non-negotiable. A valid Aadhaar, the mobile number linked to it, and a PAN. A Hero FinCorp personal loan adds its own conditions on top. You need to be 21 or older, earning at least Rs 15,000 a month, and ideally holding a CIBIL score around 725. Loans run from Rs 50,000 to Rs 7 lakh over 12 to 36 months, priced from 18% a year.

e-KYC Process Explained Step by Step

Every app runs the same e-KYC process underneath, because the data all comes from one place.

1. Consent comes first, and the lender has to record yours before it touches your Aadhaar details at all.
2. You enter the Aadhaar number, or a Virtual ID if you would rather not share the number itself.
3. UIDAI then challenges you, either with an OTP to the registered mobile or with a fingerprint or iris scan on a registered device.
4. On a match, back come your name and date of birth, your gender and address, and the photograph on file. Nothing else. Your biometrics never leave UIDAI.
5. The lender matches that name against your PAN, screens the record and files it.
6. Finally a CKYC identifier is created or refreshed, which is what lets the next institution reuse the record instead of starting over.

How to Apply for e-KYC Online

How to apply for e-KYC online depends on what you are opening. For a loan or a bank account there is no separate application at all. E-KYC sits inside the form you are already filling in.

Investments work differently and go through a KYC Registration Agency.

Opening a loan or bank account:

1. Begin the application in the lender's app or on its website.
2. Have the Aadhaar-linked mobile beside you, because that is where the OTP arrives whatever number you typed into the form.
3. Enter the Aadhaar, approve the OTP, tick the consent screen.
4. Then e-sign.

For mutual funds or a demat account, go through a SEBI-registered KRA such as CVL KRA or CAMS KRA, or let your broker do it. Complete an Aadhaar OTP or a Video KYC, upload a PAN

What Is the Full Form of e-KYC?

Electronic Know Your Customer. KYC itself is the identity and address check RBI demands before any regulated lender opens an account or sanctions a loan. Adding the "e" only means the check runs digitally, so nobody photocopies anything.

What Is the Difference Between Aadhaar e-KYC and Video KYC?

Aadhaar e-KYC is machine talking to machine. You approve an OTP or press a finger, and UIDAI answers within seconds. Video KYC puts a lender's officer on a recorded live call with you, which takes longer but covers the cases Aadhaar OTP cannot. Lenders fall back on it when the linked mobile is not with you, or when the loan is larger than OTP-only KYC permits.

Why Does e-KYC Sometimes Fail?

Nine times out of ten the mobile number is at fault. If the one sitting on your Aadhaar record is old or disconnected, the OTP simply never arrives. After that the usual suspects are a name spelt differently on PAN and Aadhaar, Mohd against Mohammed being the classic, or three wrong OTP entries in a row locking you out for the day.

Is e-KYC Mandatory for a Personal Loan?

KYC is mandatory. Doing it electronically is not. A lender can verify you through Aadhaar OTP or biometrics, over a video call, or across a counter on paper with a DigiLocker document. For an instant personal loan, though, e-KYC is the only route that gets money to you the same day.

DeepAnalyse™ Technology

A pioneering research in the modeling of AI content detection

Our AI detection model includes several components that analyze text to determine its origin and if it was written by AI. We use a multi-stage methodology designed to optimize accuracy while minimizing false positives and negatives. From the macro level to the micro one, this is how DeepAnalyse™ Technology works. Our model specializes in identifying AI generated content like Chat GPT, GPT 3, GPT 4, GPT 5, GPT 6, Gemini, Grok, Perplexity AI, Claude, DeepSeek, LLaMa models ... Finally, we employ a comprehensive deep learning methodology, trained on extensive text collections from the internet, educational datasets, and our proprietary synthetic AI datasets produced using various language models.
